PROFESSIONAL SUMMARY

Data engineer with hands-on experience building and maintaining medallion-layer data warehouses, robust ETL pipelines, and internal tooling in dynamic enterprise environments. Proven ability to deliver clean, validated data products that serve as the source of truth for reporting and downstream business needs.

WORK EXPERIENCE

Jr. Data Engineer — Hillpointe, LLC

Orlando, FL

Full-Time

December 2025 – Present

- Architected and maintained a medallion-layer (bronze/silver/gold) Azure SQL data warehouse with star-schema fact and dimension tables, powering company-wide reporting across operations, accounting, marketing, and asset management.
- Developed and maintained robust Azure Data Factory ETL pipelines ingesting data from RealPage, Entrata, Funnel, Kyriba, and Placer.ai, ensuring resilient and consistent delivery of data products to downstream consumers.
- Built and deployed internal web applications on Azure VMs using Node.js and React, enabling the team to monitor live pipeline health, key KPIs, and data freshness in real time; secured apps with NGINX reverse proxying, HTTPS/SSL, Microsoft Entra ID authentication, rate limiting, and zero-trust API authorization.
- Collaborated with Power BI analysts and cross-functional stakeholders to continuously deliver quality data products, translating business requirements into vetted data models, DAX measures, and Microsoft Fabric reports.

Data Engineer Intern — Hillpointe, LLC

Orlando, FL

Internship

May 2025 – December 2025

- Designed and built a medallion-layer data warehouse from the ground up, authoring bronze-layer external tables, 50+ silver-layer SQL views, and gold-layer stored procedures to unify data from Entrata, RealPage, and Funnel into consistent, queryable schemas.
- Developed and integrated Azure Data Factory master pipelines for scheduled, automated data refresh across the full warehouse stack, and produced data validation reports to identify and resolve discrepancies in row counts, logic, and schema drift.
- Enforced zero-trust database access by provisioning all new users and service accounts with no default permissions, granting only the minimum role-based and schema-level access required for each workload.
- Supported onboarding of Microsoft Fabric lakehouse and semantic models; collaborated with business analysts and contractors to document and hand off data assets.

EDUCATION

Bachelor of Applied Science – Computing Technology & Software Development

August 2023 – December 2025

Valencia College, Orlando, FL | GPA: 3.83 | President's List (5 semesters)

Relevant Coursework — Data Structures & Algorithms, Seminar in Advanced Software Development, Software Development Capstone, Applied Project Management, Advanced Database Development, Machine Learning Essentials, Software Integration, Configuration & Testing, Technical Writing for Software.

Associate in Arts – General Studies

August 2021 – August 2023

Valencia College, Orlando, FL | GPA: 3.67 | President's List (3 semesters)

SKILLS

Languages: Java, Python, SQL, JavaScript, TypeScript, HTML, CSS

Databases: SQL Server, SQLite, MySQL, Snowflake, Azure SQL, PostgreSQL, linked servers

Tools & Technologies: Git/GitHub, Docker, Jenkins, Node.js/React/Express, REST APIs, Pandas

Cloud & Azure: Azure Data Factory, Azure Blob Storage, Azure Windows VMs, Microsoft Entra ID, Microsoft Fabric, Power BI, Azure Functions, Azure Logic Apps

Data Engineering: Medallion architecture (bronze/silver/gold), star schema design, ETL/ELT pipelines, zero-trust access provisioning, query optimization

CERTIFICATIONS

AWS Academy Machine Learning Foundations

2025

Amazon Web Services (AWS)

AWS Academy Cloud Foundations

2025

Amazon Web Services (AWS)

Network Pro

April 2023

TestOut – Awarded via Valencia College

Technical Certificate – Operations Support and Services

April 2024

Valencia College

PROJECTS

Collecting and Analyzing Stock Data with Python

Built scripts to collect real-time stock prices via API, perform cloud-based execution, and visualize trends with Matplotlib.

Fern — Local Password Manager

Cross-platform, fully local password manager built with Python, SQLAlchemy, SQLite, and Flet. Uses Fernet encryption with PBKDF2 key derivation for security. Features include a setup wizard, password generator with strength indicator, search/sort, clipboard copy, CSV export, auto-lock, and a full pytest test suite.

Software Development Capstone — City of Orlando Device Loan-Out App

Co-led a team of 10 to design and build a full-stack Vue.js web application for the City of Orlando's device loan-out program. Followed the full SDLC from brainstorming and design mockups through beta development, testing, and final delivery. As co-lead, managed the GitHub repository, reviewed and merged pull requests, established the baseline repo structure, delegated tasks per module, facilitated team meetings, and submitted deliverables on behalf of the team.
